Aim: To implement a custom token like ERC_20 token of ethereum blockchain and add functionalities like burn tokens, mint new tokens and whitelist a address(whitelisting allows the contract to transfer tokens only if address is whitelisted by Owner).

Code

```
pragma solidity ^0.5.1;

// SAFE Mathematical Operations
library SafeMath {
    function sub(uint256 a, uint256 b) internal pure returns (uint256) {
        assert(b <= a); //error handling condition
        return a - b; //To Avoid Overflows
    }

    function add(uint256 a, uint256 b) internal pure returns (uint256) {
        uint256 c = a + b;
        assert(c >= a);
        return c;
    }
}

contract IntelliContract {

    string public constant name = "CustomEnergyToken"; // solidity
    automatically creates a getter function for public variables
    string public constant symbol = "CET"; // getter function is a function
    used to retrieve a specific value from ledger
    uint8 public constant decimals = 18; // Similar to Ether

    // Setter functions : Function Which Creates or Updates A Value of a variable
    on Ledger.
    // Getter Functions : Function Which Get or Fetches A Value of a variable From
    Ledger.

    event Approval(address indexed tokenOwner, address indexed spender, uint
tokens);
    event Transfer(address indexed from, address indexed to, uint tokens);

    modifier onlyOwner {
        require (msg.sender == ownerCon);
        _;
    }
}
```

```

mapping(address => uint256) balances;
mapping(address => bool) whiteList_addresses;
// -----
----
mapping(address => mapping (address => uint256)) allowed; // nested
mapping

// Nested Mapping Has 2 Keys & 1 Value

uint256 totalSupply_;
address ownerCon;

using SafeMath for uint256;

constructor(uint256 total) public { // special function , only called at
time of deployemnet
    totalSupply_ = total ;
    balances[msg.sender] = total ; // To Deposit all the newly generated
tokens in owner's account
    whiteList_addresses[msg.sender] = true;
    ownerCon = msg.sender;
}

function totalSupply() public view returns (uint256) {
    return totalSupply_;
}
// getter function

function balanceOf(address inputAddress) public view returns (uint) {
    return balances[inputAddress];
}
// getter function

function transfer(address receiver, uint numTokens) public
IsWhiteListed(receiver) returns (bool) {
    require(numTokens <= balances[msg.sender], "Not Sufficient Balance");
    balances[msg.sender] = balances[msg.sender].sub(numTokens);
    balances[receiver] = balances[receiver].add(numTokens);
    emit Transfer(msg.sender, receiver, numTokens); // logging these
values using events
    return true;
}

```

```

    function approve(address approved_addr, uint numTokens) public returns
(bool) {
        allowed[msg.sender][approved_addr] = numTokens;
        emit Approval(msg.sender, approved_addr, numTokens);
        return true;
    }

    function allowance(address owner, address token_manger) public view
returns (uint) {
        return allowed[owner][token_manger];
    } // what allowance has been provided by token_owner to Token_manager

    //NOTE -- requires buyer address to be whitelisted address
    function transferFrom(address owner, address buyer, uint numTokens) public
returns (bool) {
        require(numTokens <= balances[owner]);
        require(numTokens <= allowed[owner][msg.sender]);
        balances[owner] = balances[owner].sub(numTokens);
        allowed[owner][msg.sender] =
allowed[owner][msg.sender].sub(numTokens);
        balances[buyer] = balances[buyer].add(numTokens);
        emit Transfer(owner, buyer, numTokens);
        return true;
    }

    function Mint_New_Tokens(uint256 numTokens) external onlyOwner{
        require(numTokens>0, "Enter the number of tokens more than 0");
        balances[msg.sender] = balances[msg.sender].add(numTokens);
        totalSupply_ = totalSupply_.add(numTokens);
        emit Transfer(address(0),msg.sender,numTokens);
    }
    //function to increase the total supply of tokens

    function burnTokens(uint256 numTokens) external onlyOwner{
        require(numTokens<=balances[msg.sender],"Not enough tokens to burn");
        require(numTokens>0, "Enter the number of tokens more than 0");
        balances[msg.sender] = balances[msg.sender].sub(numTokens);
        totalSupply_ = totalSupply_.sub(numTokens);
        emit Transfer(msg.sender,address(0),numTokens);
    }
    //function to decrease the total supply of tokens(burn tokens)

    function whitelList_A_Address(address add_To_whitelist)public onlyOwner{
        whitelList_addresses[add_To_whitelist] = true;
    }

    modifier IsAlreadyWhitelisted(address VerifyAddress){

```

```

        require(whitelist_addresses[VerifyAddress] == true, "Address is
already whitelisted");
    _;
}

modifier IsWhitelisted(address VerifyAddress){
    require(whitelist_addresses[VerifyAddress] == true,"Address needs to
be whitelisted");
    _;
}
}

```

Output:

The screenshot shows the Remix Ethereum IDE interface. On the left, the 'DEPLOY & RUN TRANSACTIONS' panel is active, showing the 'IntelliContract - contracts/ERC_20.sol' file. The main editor displays the Solidity code for the 'IntelliContract' contract. The code includes a 'SafeMath' library and functions for adding and subtracting integers. The bottom status bar shows the deployment details: '[Block:2288770 txIndex:1] from: 0x6cA...8F5b9 to: SafeMath.(constructor) value: 0 wei data: 0x605...18032 logs: 0 hash: 0x49e...c3d91'.
